Courses

- Full stack web development

Mississauga, ON

WORK EXPERIENCE

Web developer

Mirage Shipping

01/2018 – Present

Automotive shipping company which is owned by my family.

Achievements/Tasks

- Created their web app.
- Manage backups.
- make sure that the app is always up and running.
- The clients number increased a lot after we created this app which put us miles a head from competitors.
- Saved the company lots of money, because the app made it easier for an employee to do multiple tasks at once.

Linux distros (Ubuntu)

Photoshop

Adobe XD

Git

PERSONAL PROJECTS

Automotive Shipping project v1 (09/2017 – 01/2018)

- My first big project, it is a logistics app for automotive shipping. It includes (invoicing, inventory, statistics, reports, incomes and expenses tracking, containers tracking, private clients accounts, and much more)
- Tech stack : MEN stack (MongoDB, Express, Nodejs)

Automotive Shipping project v2 (12/2018 – 03/2019)

- Includes all the features in v1 and much more.
- The main motive for creating this app was performance, I didn't consider performance in v1, so we ran into bottlenecks.
- I implemented image compression in this version which saved lots of space and made the app load faster.
- Demo URL: <https://shipping.saadhammood.com>.

Gazebo Burgers Website (01/2019 – 01/2019)

- Website for a restaurant located in Oakville, ON.
- URL : gazeboburgers.ca.
